🎥 Editors Note

🎥 EDITOR'S NOTE

The rule for all four: the static IS the frame. Bottle and headline are on screen from frame one to the last frame, same size, same place, and they never move, change, animate in or animate out. The only thing that moves is the scene (the needle, the head-turn, the urinal cracking, the splash) and the sound.

Format: 6 to 7 seconds each, 9:16 and 4:5, loop-friendly ending. Text in the same white bold caps with black stroke as the statics.

The sound is the ad. Mix the stream loud and build it. Real SFX only (drips, pressure washer, jackhammer, porcelain cracking), no cartoon sounds, no music, no VO.

Scenes: recreate the four AD EXAMPLE 2 images as closely as possible. Generate the bathrooms if we can't shoot them, but keep them photoreal like the statics.

Compliance: no genitals, no visible stream, men filmed from behind at shoulder height, the water never shown leaving a person. The sound and the reactions do the work.

💡 IDEATION AD CONCEPT 💡 (The theme or overall idea of the ad)

Turn the winning Flow meter and urinal statics into 6 to 7 second videos in the Primal Viking "noise complaint" format: one line of text, the bottle in the scene, and the sound effect telling the joke. No VO, no script, the flow is the punchline.

Four versions, one per static, so we learn which gag carries as motion.

TYPE OF AD

- [x] Video Ad
- [ ] **Image Ad**
- [ ] **Carousel Ad**

SIZES NEEDED

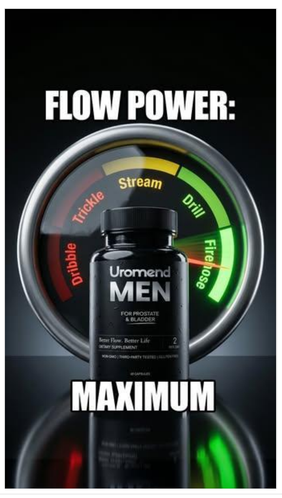

- [ ] **1080x1080** (1x1)
- [ ] **1080x1350** (4x5)
- [x] 1080x1920 (9x16)
- [ ] **1920x1080** (16x9)

AD EXAMPLE 2

Copywriting Checklist (when writing)

1. **Who am I writing this for? (Sub avatar + beliefs)**
   Declining Alpha
2. **Why am I writing it for them?**
   because having a strong stream is very masculine and is an angle that's always been working great for us
3. **Am I starting broad or targeted?**
   Targeted
4. **Does my hook have a gap, trigger emotion, and have high stakes?**
   Yes
5. **What is the mechanism?**
   no mechanism, but we show the effects of the product.
6. **What is the authority?**
   No authoirty
7. **Is the copy visual?** ***(Proofing your writing with AI module)***
   No, but the visuals are
8. **Is the copy falsifiable (can somebody say it's true/false?)**
   Yes
9. **Can nobody else write this? (Search your headline on Google with " ")**
   Maybe
10. **What is this copy actually communicating?**
    it's communicating that with Uromend, you get a strong stream.
11. **Is this writing at a 6th grade reading level?**
    Yes
12. **Can this be condensed further without losing meaning?**
    No
13. **Would you say this door-to-door? (spoken not written)**
    No

🎢 AD STRUCTURE 🎢

🪝 HOOKS 🪝

VIDEO 1

VISUALS: Flow Power meter + the stream (AD EXAMPLE 2, image 1, brought to life)

The static as the base frame: bottle dead centre, FLOW POWER ACTIVATED on top, the meter beside the bottle. Bottle and text never move or change.

Two things move, in sync: the needle on the meter and a stream of liquid shooting across the screen behind the bottle, left to right, from nowhere into nowhere (no person, no body, just the liquid against the dark background). As the needle hits each label, the stream matches it:

0 to 1s, **Dribble:** needle in the red. A few drops fall straight down behind the bottle, barely moving sideways.

1 to 2.2s, **Trickle:** a thin weak line arcs a short way across and dies.

2.2 to 3.4s, **Stream:** a solid steady stream crossing most of the screen.

3.4 to 4.6s, **Drill:** the stream tightens into a hard jet, straight across, meter glowing.

4.6 to 6s, **Firehose:** the jet goes full width with spray and mist coming off it, needle pinned in the green, the whole meter lit up, bottle glints.

Audio: the sound builds exactly with the needle: single drips, then a trickle, then a steady stream into a bowl, then a drilling pressure-washer sound, then a firehose roar. A "ding" when the needle lands on Firehose. No voice, no music.

Compliance: the liquid is never shown leaving a person. It's an abstract stream against the background, think a hose or a tap you can't see, so it reads as a flow demo, not urination.

On-screen text (static, whole video, never changes)

Top: FLOW POWER ACTIVATED

Meter labels: Dribble, Trickle, Stream, Drill, Firehose

Same white bold caps with black stroke as the static. Nothing animates in or out.

VIDEO 2

VISUALS: The weak should fear the strong (AD EXAMPLE 2, image 2, brought to life)

The static as the base frame: two urinals, old man at the far one, younger guy at the near one, both from behind at shoulder height, nothing below the waist, no stream visible. Bottle on the floor between them, big, and it stays there the whole video. Headline stays on screen the whole video.

The sound tells the story. The old man's stream hits the porcelain like a pressure washer. The young guy slowly turns his head toward him, eyes wide (the pose from the static), holds the stare. Old man finishes, zips, walks off without a glance. Young guy still staring.

Audio: room tone, then the old man's stream: hard, drilling, porcelain rattling, way louder than normal. The young guy's own trickle is faint next to it. Zip, footsteps, door.

Compliance: from behind only, shoulders up for the turn, no genitals, no visible stream.

On-screen text (static, whole video, never changes)

Top: THE WEAK SHOULD FEAR THE STRONG

Bottle in frame the whole time, no extra text.

VIDEO 3

VISUALS: From dribbling to drilling (AD EXAMPLE 2, image 4, brought to life)

The static as the base frame: row of three urinals, nobody in frame, bottle on the floor front right, headline on top. Bottle and headline stay exactly where they are the whole video. Camera locked off.

0 to 2s: drips hitting the middle urinal, one at a time. 2 to 4s: the sound builds from a trickle to a jackhammer, the urinal starts to vibrate. 4.5s: the porcelain cracks and a hole blows through the middle urinal, chips scatter on the floor (end on the static image). 5 to 7s: silence, one last drip echoes.

Audio: drip, drip, drip, trickle, jackhammer, porcelain cracking, chips hitting tile, then one drip.

Compliance: no person in frame, the joke is sound and the broken urinal only.

On-screen text (static, whole video, never changes)

Top: "FROM DRIBBLING TO DRILLING"

Bottle in frame the whole time, no extra text.

VIDEO 4

VISUALS: This is possible on Uromend (AD EXAMPLE 2, image 3, brought to life)

The static as the base frame: the long corridor, one urinal at the left edge, the floor marker way down the hall, THIS IS POSSIBLE on top and ON UROMEND at the bottom. Bottle on the floor front left, big, stays the whole video. Text stays the whole video, never changes. Camera locked off, nobody visible at the urinal.

0 to 1.5s: quiet, a stall door creaks somewhere. 1.5s: a stream starts off-screen at the urinal, hard. 2.5s: the splash lands on the floor far down the corridor, right on the marker, and keeps hitting it. 4s: a janitor's head pops out of the far stall and looks at the puddle, then slowly toward the urinal. 6s: hold on his face.

Audio: creak, stream starts close, splash lands far with a half-second delay (that delay is the joke), janitor mutters "what the...", stream keeps going.

Compliance: nobody shown at the urinal, only sound and where it lands.

On-screen text (static, whole video, never changes)

Top: THIS IS POSSIBLE

Bottom: ON UROMEND

Same placement and type as the static.
